DEPARTMENT OF STATISTICS

PROFESSORS

İLK DAĞ, Özlem ***(Chairperson)***: B.S., METU; M.S., Ph.D, Iowa State University.
AKKAYA (DENER), Ayşen: B.S., M.S., Ph.D., METU.
BATMAZ, İnci: B.S., METU; M.S., Ph. D., Ege University.
ISLAM, M. Qamarul: B.S., Agra University; M.S., University of Karachi; Ph.D., METU.
SÜRÜCÜ, Barış: B.S., M.S., Ph.D., METU.
PURUTCUOĞLU, Vilda: B.S., M.S., METU; Ph.D., Lancaster University.

ASSOCIATE PROFESSORS

YOZGATLIGİL (TALU), Ceylan (Associate Chairperson): B.S., M.S., METU; Ph.D., Temple University.
KALAYLIOGLU, I. Zeynep**:** B.S., METU; M.S., Ph.D., North Carolina State University.
ERKAN BAŞBUĞ, B. Burçak: B.S., METU; M.S., University of Warwick; Ph.D., London School of Economics.
VARDAR ACAR, Ceren: B.S., M.S., METU; Ph.D., Bowling Green State University

ASSISTANT PROFFESORS

GOKALP YAVUZ, Fulya: B.S. Hacettepe University, M.S., Purdue University, Ph.D., Yıldız Technical Universtiy.

GENERAL INFORMATION: The Department of Statistics offers courses leading to the degree of Bachelor of Science, Master of Science and Doctor of Philosophy.

The purpose of the programs is to train students and researchers to carry out research based on extensive observations and experimentations; collection and analysis of data in laboratories and social, economic and public systems and organizations and to derive inferences about the behavior of such systems. The students who complete the statistics education in the Department will be able to make their skills available in the science of inductive inference for research, industrial and social organizations by playing an important part in solving problems of science and practical life. Graduates are expected to take part in research and development activities in such institutions as the Ministry of Development, Turkish Statistical Institute, Ministries, State Economic Enterprises and other public and private organizations. To this end, the Department emphasizes the theoretical and applied statistics together with computational statistics in its undergraduate and graduate programs.

LABORATORIES AND EQUIPMENT: The department has its own computer facilities. A laboratory is open to the use of the students of the department. A large number of statistical and graphical package programs are available in the PC's of the laboratory.

MAJOR RESEARCH INTERESTS OF THE STAFF: The major graduate level research areas are, design of experiments, reliability, time series analyses, survival analyses, actuarial risk and insurance, , disaster risk management, extremes of random functions and applications, stochastic modeling of engineering systems, computational statistics, response surface methodology, simulation, survey methods research, categorical data analysis, robust statistical methods, biostatistics, data mining, longitudinal data analysis, multilevel statistical modeling, Bayesian data analysis.

UNDERGRADUATE PROGRAM: The required courses for the Bachelor of Science (B.S.) degree in Statistics are listed in the following pages. All students are required to develop working knowledge and skills in the computers, scientific and statistical computing.

GRADUATE PROGRAMS:

Degrees

The Department of Statistics offers M.S. and Ph.D. degrees in Statistics. The programs enable students to acquire a sound understanding of the theoretical basis of statistics and emphasize the formation of research capability in applied research work.

In addition to the relevant regulations of the Graduate School for granting the M.S. and Ph.D. degrees, the following are required by the Department,

a) For the M.S. degree: The completion of at least seven courses with credits.
b) For the Ph.D. degree: The completion of at least eight courses with credits.

The main objective of the master's program is to train students in applied statistics by imparting knowledge of the theory and practice of statistics. This program will furnish its graduates with abilities to take part in studies involving extensive observations and experimentations; collection and analysis of data in laboratories, social, economic and public systems, organizations and to derive inferences about the behavior of underlying systems. On the other hand, the Ph.D. program is structured with the objective of preparing students for careers in university teaching and research and for industrial and government positions that involve consulting and research in new statistical methods.

CAREER OPPORTUNITIES: The graduate programs are designed to train students for positions in industry, government and academic institutions. The graduates of the programs will be able to make their skills available in the science of inductive inference to research, industrial and social organizations by playing important part in solving problems of science and practical life. The interdisciplinary nature of the programs brings together faculty and students interested in statistical applications in engineering, science, social sciences, management and planning, as well as statistical theory, and this nature enriches the career opportunities for graduates. Some career opportunities for the graduates are:

Research and teaching staff opportunities in academia; wide spectrum jobs at the industry and government offices; private sector opportunities such as consulting; opportunities at R&D and statistical software development centers.

STATISTICAL COMPUTING: All graduate students are required to develop working knowledge and skills in the computers and scientific computing.

UNDERGRADUATE CURRICULUM

FIRST YEAR

First Semester

Course Code	Course Name	Credit(h/w)	ECTS
STAT 155	Principles of Statistics	4(3-2)	8
MATH 119	Calculus with Analytic Geometry	5(4-2)	7.5
CEIT 101	Introduction to Scientific Thought and Research Methods	3(2-2)	4
ENG 101	English for Academic Purposes I	4(4-0)	6
IS 100	Introduction to Information Technologies and Application	0(0-2)	1

Second Semester

Course Code	Course Name	Credit(h/w)	ECTS
STAT 111	Statistics by Real Life Examples	3(3-0)	5
STAT 156	Statistical Methods	4(3-2)	8
MATH 120	Calculus for Functions of Several Variables	5(4-2)	7.5
CENG 230	Introduction to C Programming	3(2-2)	4
ENG 102	English for Academic Purposes II	4(4-0)	6

SECOND YEAR

Third Semester

Course Code	Course Name	Credit(h/w)	ECTS
STAT 203	Probability I	4(3-2)	8
STAT 291	Statistical Computing I	4(3-2)	8
MATH 219	Intro. to Differential Eqns.	4(4-0)	7
MATH 260	Basic Linear Algebra	3(3-0)	5
HIST 2201	Principles of Kemal Atatürk I	0(2-0)	2

Fourth Semester

Course Code	Course Name	Credit(h/w)	ECTS
STAT 204	Probability II	4(3-2)	9
STAT 250	Applied Statistics	5(4-2)	8
STAT 292	Statistical Computing II	4(3-2)	8
MATH 250	Advanced Calculus in Statistics	5(4-2)	9
ENG 211	Academic Oral Presentation Skills	3(3-0)	4
HIST 2202	Principles of Kemal Atatürk II	0(2-0)	2

THIRD YEAR

Fifth Semester

Course Code	Course Name	Credit(h/w)	ECTS
STAT 303	Mathematical Statistics I	4(3-2)	8
STAT 363	Linear Models I	4(3-2)	8
STAT 365	Survey Sampling Techniques	5(4-2)	8
ENG 311	Advanced Communication Skills	3(3-0)	4
	Non Departmental Elective	3(3-0)	5
TURK 303	Turkish I	0(2-0)	2

Sixth Semester

Course Code	Course Name	Credit(h/w)	ECTS
STAT 304	Mathematical Statistics II	4(3-2)	8
STAT 361	Computational Statistics	4(3-2)	8
STAT 364	Linear Models II	4(3-2)	9
STAT 376	Stochastic Processes	5(4-2)	9
	Non Technical Elective	3(3-0)	5
TURK 304	Turkish II	0(2-0)	2

FOURTH YEAR

Seventh Semester

Course Code	Course Name	Credit(h/w)	ECTS
STAT 457	Statistical Design of Experiments	4(3-2)	9
STAT 467	Multivariate Analysis	5(4-2)	8
	Departmental Elective	3(3-0)	8
	Non Departmental Elective	3(3-0)	5

Eighth Semester

Course Code	Course Name	Credit(h/w)	ECTS
STAT 412	Statistical Data Analysis	4(3-2)	8
	Departmental Elective	3(3-0)	8
	Departmental Elective	3(3-0)	8
	Non Departmental Elective	3(3-0)	5

MINOR PROGRAM IN STATISTICS

This program is designed for students of non-statistical background.

Preliminary courses required for admission:
MATH 119 Calculus I or equivalent
MATH 120 Calculus II or equivalent
MATH 260 Basic Linear Algebra or equivalent
STAT 156 Statistical Methods or equivalent

Compulsory Courses
STAT 203 Probability I
STAT 204 Probability II
STAT 303 Mathematical Statistics I
STAT 304 Mathematical Statistics II
STAT 363 Linear Models I

Plus one elective course offered by the Department of Statistics.

DESCRIPTION OF UNDERGRADUATE COURSES

STAT 111 Statistics by Real Life Examples (3-0)3
Readings and projects in areas of current statistical real life application including environmental science, industrial statistics, official statistics, actuarial statistics, business statistics, physical and social sciences, and medical statistics.

STAT 155 Principles of Statistics (3-2)4
Brief history of statistics. Basic definitions and types of data. Visualization of data. Descriptive statistics. Avoiding misleading conclusions. Random variables. Some known statistical distributions. Introduction to use of computer solving tools.

STAT 156 Statistical Methods (3-2)4
Sampling distributions, estimation, confidence intervals, hypothesis testing, distribution fitting, analysis of variance for one factor design, linear regression, association between two categorical variables, basic nonparametric procedures.
Prerequisite: STAT 155

STAT 201 Introduction to Probability and Statistics I (3-0)3
Experiments and events. Set theory. Axioms and basic theorems of probability. Finite sample spaces and counting techniques. Independent events. Conditional probability. Random variables and distributions. Expectation, variance, covariance and correlation. Some special distributions.

STAT 202 Introduction to Probability and Statistics II (3-0)3
Random samples. Sample mean and variance. Chebychev's inequality. Law of large numbers. Central limit theorem. Estimation. Maximum likelihood, unbiased, minimum variance unbiased, consistent and efficient estimators. Sufficiency. Confidence intervals. Hypothesis testing. Introduction to nonparametric methods. Regression and analysis of variance.
Prerequisite: STAT 201

STAT 203 Probability I (3-2)4
Sample space, events, basic combinatorial probability, conditional probability, Bayes' theorem, independence, random variables, distributions, expectation.

STAT 204 Probability II (3-2)4
Transformations of random variables, generating functions, conditional expectation, limit theorems, central limit theorem, limiting distributions.
Prerequisite: STAT 203, MATH 119

STAT 250 Applied Statistics (4-2)5
Sampling distributions. Sample drawing techniques. Estimation and testing for one or two population characteristics. Maximum likelihood estimation of parameters. Measures of association. Simple and multiple regression. Introduction to design of experiments, analysis of variance; one-way, multiway classifications. Multiple comparisons. Basic nonparametric procedures. Elementary time series analysis; trends, seasonality, forecasting. Indexing. Some applications in medicine, science, engineering and social sciences.
Prerequisite: STAT 156

STAT 256 Numerical Methods (3-2)4
Accuracy in numerical computations. Numerical solution of linear and nonlinear algebraic equations. Finding eigen-values and eigenvectors. Finite difference calculus. Interpolation and extrapolation. Numerical differentiation and integration. Numerical approximation methods.
Prerequisites: STAT 291 or STAT 292, MATH 260

STAT 291 Statistical Computing I (3-2)4
Introduction to statistical techniques in statistical software. Managing and analyzing data using statistical database packages. Introduction to MATLAB with applications to matrix algebra.
Prerequisites: CENG 230, STAT 156

STAT 292 Statistical Computing II (3-2)4
Introduction to programming and computation. Introduction to computer organization and basic data structures. An advanced programming language with applications to statistical procedures.
Prerequisite: CENG 230

STAT 303 Mathematical Statistics I (3-2)4
Common theoretical distributions. Sampling distributions. Principles of point estimation. Techniques of estimation. Properties of point estimators. Optimality criteria in estimation. Selected topics from robust inference. Bayesian inference.
Prerequisite: STAT 204 or CD, MATH 120

STAT 304 Mathematical Statistics II (3-2)4
Region (interval) estimation. Hypothesis testing. Optimality properties for hypothesis testing. Likelihood ratio tests. Sequential tests.
Prerequisite: STAT 303

STAT 361 Computational Statistics (3-2)4
Random number generation. Generating from other distributions. Monte Carlo methods for inferential statistics. Resampling. Data partitioning. Cross-validation. Bootstraping. Jackknifing. Tools for exploratory and graphical data analysis. Nonparametric probability density estimation.
Prerequisite: STAT291

STAT 363 Linear Models I (3-2)4
Simple and Multiple Linear Regression Models. Estimation, interval estimation and test of hypothesis on the parameters of the models. Model adequecy checking. Multicollinearity. Transformation.
Prerequisites: MATH 260, STAT 156

STAT 364 Linear Models II (3-2)4
Simple nonlinear models, Less than full rank models : One-way , Two-way ANOVA models, Multiple comparison tests, Analysis of Covariance (ANCOVA) Models, Introduction to generalized linear models (GLM), Poisson regression, Logistic regression.
Prerequisite: STAT 363

STAT 365 Survey Sampling Techniques (4-2)5
Introduction to survey sampling. Probability sampling techniques. Simple random sampling. Stratified element sampling. Systematic sampling. Equal sized cluster sampling. Unequal sized cluster sampling. PPS selection techniques. Sampling errors. Survey research methods. Planning of sample surveys. Questionnaire design techniques. Survey research project.
Prerequisite: STAT 156 or CD

STAT 376 Stochastic Processes (4-2)5
Review of Probability. Theory Markov Chains. Discrete and Continuous time Markov Chains. Poisson Processes. Queuing Processes. Birth and Death Processes. Decision Analysis.
Prerequisite: MATH 260, STAT 204

STAT 412 Statistical Data Analysis (3-2)4
Types of data. Graphical and tabular representation of data. Approaches for finding unexpected in data. Exploratory data analyses for large and high-dimensional data. Analysis of categorical data. Elements of robust estimation. Handling missing data. Smoothing methods. Data mining.
Prerequisite: STAT 291 or STAT 292, STAT 363, or CD

STAT 444 Advanced Statistical Computing (3-0)3
Reading raw data files and Statistical Analysis Software (SAS) data sets, and writing the results to SAS data sets; subsetting data; combining multiple SAS files; creating SAS variables and recoding data values; creating listing and summary reports.
Prerequisite: STAT 156 or CD

STAT 457 Statistical Design of Experiments (3-2)4
Strategies for experimentation, randomized complete and balanced incomplete block designs, Latin squares. General, two-level and fractional factorials. Blocking and confounding in two-level factorials. Three and mixed level factorial and fractional factorials. Introduction to response surface methodology. Second-order experimental designs. Nonnormal responses. Unbalanced data in factorials. Split-plot designs, Nested designs, Random effect models. Repeated measures.
Prerequisite: STAT 363 or CD.

STAT 460 Nonparametric Statistics (3-0)3
Review of basic statistics. Distribution-free statistics, ranking statistics, U statistics. Large sample theory for U statistics. Tests based on runs. Asymptotic relative efficiency of tests. Hypothesis testing, point and interval estimation. Goodness of fit, rank-order (for location and scale), contingency table analysis and relevant models. Measures of association, analysis of variance.
Prerequisite: CD.

STAT 461 System Simulation (3-2)4
Introduction to discrete-event system simulation and simulation software. Statistical models in simulation. Queuing models. Input data modeling. Variance reduction techniques. Verification and validation of simulation models. Output analysis for a single model. Comparison and evaluation of alternative system design.
Prerequisite: STAT 156 and STAT 292

STAT 462 Biostatistics (3-2)4
Populations and samples. Types of biological data. Data transformations. Survival data analysis. Life tables. Sample size determination in clinical trials. Measures of association. The odds ratio and some properties. Application of generalized linear models and logistic regression to biological data. Analysis of data from matched samples.
Prerequisite: STAT 156

STAT 463 Reliability (3-0)3
Reliability studies. Statistical failure models. Censoring and truncation and their types. Useful limit theorems in reliability. Inference procedures for lifetime distributions. System reliability. Bayesian methods. Accelerated life testing.
Prerequisite: STAT 304

STAT 464 Operations Research (2-2)3
Basic operations research methodology. Basic models such as network flow models, project scheduling, dynamic programming, and production and inventory control. LP and game theory. Two person zero-sum games and mixed strategies.
Prerequisite: MATH 260

STAT 467 Multivariate Analysis (4-2)5
Sample mean vector and sample covariance matrix; matrix decomposition; multivariate normal and Wishart distributions; parameter estimation; hypothesis testing; MANOVA; principal components; factor analysis; multivariate classification and clustering; canonical correlation.
Prerequisites: MATH 260, STAT 156

STAT 472 Statistical Decision Analysis (3-2)4
Introduction to decision making and types of decision situations. Bayes theorem and Bayesian decision theory. Prior, posterior and conjugate prior distributions. Loss functions. Empirical Bayesian approach. Utility theory for decision making. Value of information. Sequential decision procedures. Multidecision problems.
Prerequisite: STAT 204

STAT 477 Statistical Quality Control (2-2)3
Introduction to concepts of quality and total quality management. Basic principles of teamwork and learning. Probability in Quality Control. Methods and Philosophy of Statistical Process. Control Charts for variables and attributes. Cumulative-Sum and Exponentially Weighted Moving-Average Control Charts. Process Capability Analysis. Introduction to Experimental Design and Factorial Experiments. Taguchi Method, Lot-by-Lot Acceptance Sampling for attributes and by variables.
Prerequisite: STAT 156

STAT 479 Linear Programming (2-2)3
Introduction to Linear Programming (LP). The simplex method. Transportation, assignment and transshipment problems. Sensitivity testing, duality theory and its applications. Advanced methods in LP and revised simplex algorithm.
Prerequisite: MATH 260

STAT 480 Application of Statistical Techniques in Socio-Economic Research (3-2)4
Principals of empirical socio-economic research. Formulation of research problems, determination of research design, application of sampling design. Strategies of field work, collection of data, improving data quality, selecting appropriate statistical methods. Evaluation of test of hypothesis and interpretation of findings. Preparation and presentation of a research proposal and report.
Prerequisite: STAT 412

STAT 482 Categorical Data Analysis (3-2)4
Probability distributions and measures of association for count data. Inferences for two-way contingency tables. Generalized linear models, logistic regression and loglinear models. Models with fixed and random effects for categorical data. Model selection and diagnostics when response is categorical. Classification trees.
Prerequisite: STAT 304

STAT 487 Insurance and Actuarial Analysis (3-0)3
Basic definition of insurance. Historical background. Insurance applications in government and private sector, regulations and legislation in insurance. Fundamentals of insurance. Types of insurance, disaster insurance and risk management applications around the world. Turkish catastrophe insurance pool. Definition of risk, probability aspect of risk. Utility theory, claim processes, distribution of claim processes.
Prerequisite: Consent of the department.

STAT 493 New Horizons in Statistics (3-0)3
New advances in the field of statistics.
Prerequisite: CD

STAT 495 Applications in Statistics (2-2)3
Applications of different statistical methods in various disciplines such as medicine, science, engineering and social sciences. Presentation of projects involving these applications as group studies.
Prerequisite: STAT 156

STAT 497 Applied Time Series Analysis (3-2)4
Time series as a stochastic process. Means, covariances, correlations, stationarity. Moving averages and smoothing. Stationary and nonstationary parametric models. Model specification. Estimation and testing. Seasonality. Some forecasting procedures. Elementary spectral domain analysis. Exponential smoothing methods. Unit root tests.
Prerequisite: CD

STAT 499 Undergraduate Research (1-4)3
This course is intended to improve the research capabilities of graduating students. Each student will be given a project and an academic advisor; lectures will be given on research design, data evaluation and report writing. A final report and/or seminar is required at the end of the semester.
Prerequisite: CD

***CD:Consent of the Department**
